

AMENDMENTS TO THE CLAIMS:

The following listing of claims will replace all prior versions, and listings, of claims in the application.

I. (currently amended) An advertisement supplying system for displaying a point which gives viewing persons an incentive to view an advertisement in combination with advertisement information on a terminal apparatus connected thereto via a computer network, comprising:

~~storage means for~~ a memory storing thereinto identification information of a customer and a point degree owned by the customer in relation to each other;

~~means for~~ a user interface accepting the identification information of the customer from a terminal apparatus of the customer; and

~~means for~~ a web control unit acquiring the point degree owned by the customer from said ~~storage means~~ memory, said owned point degree being related to the accepted identification information of the customer; ~~and~~

~~display point degree determining means for determining, wherein the web control unit~~ determines a display point degree to be displayed in combination with the advertisement information based upon a relationship between the point degree owned by the customer and the display point degree with reference to a predetermined rule; ~~wherein,~~

said rule being that a point degree owned by the customer increases in response to the customer selecting the advertisement and the display point degree decreases for display in combination with a subsequent display of the advertisement information, and

the display point degree does not decrease to zero for the subsequent display of the advertisement information in response to the customer first selecting the advertisement.

2-3. (canceled)

4. (previously presented) The advertisement supplying system as claimed in claim 1 wherein:
a minimum value of the point degree to be displayed is equal to 0.

5. (currently amended) An advertisement supplying system for displaying a point which gives viewing persons an incentive to view an advertisement in combination with advertisement information on a terminal apparatus connected thereto via a computer network, comprising:

~~storage means~~ a memory for storing thereinto identification information of a customer and personal information related to the customer in relation to each other;

~~means for~~ a user interface accepting the identification information of the customer from a terminal apparatus of the customer; and

~~means for~~ a web control unit acquiring the personal information related to the customer from said ~~storage means~~ memory, said personal information being related to the accepted identification information of the customer; ~~and~~

~~display point degree determining means for determining,~~ wherein the web control unit determines a display point degree to be displayed in combination with the advertisement information based upon a relationship between the point degree owned by the customer and the display point degree with reference to a predetermined rule; ~~wherein,~~

said rule being that a point degree owned by the customer increases in response to the customer selecting the advertisement and the display point degree decreases for display in combination with a subsequent display of the advertisement information, and

the display point degree does not decrease to zero for the subsequent display of the advertisement information in response to the customer first selecting the advertisement.

6. (previously presented) The advertisement supplying system as claimed in claim 5 wherein:

the personal information related to the customer corresponds to information as to at least any one of a sex of the customer, an age thereof, and a taste thereof.

7. (cancelled)

8. (previously presented) A computer readable medium for causing a computer to function as an advertisement supplying system for displaying a point which gives viewing persons an incentive to view an advertisement in combination with advertisement information on a terminal apparatus connected thereto via a computer network, the computer readable medium having encoded thereon computer codes which when executed on a processor perform the steps of:

storing identification information of a customer and a point degree owned by the customer in relation to each other;

accepting the identification information of the customer from a terminal apparatus of the customer;

acquiring the point degree owned by the customer related to the accepted identification information of the customer; and

determining a display point degree to be displayed in combination with the advertisement information based upon a relationship between the point degree owned by the customer and the display point degree with reference to a predetermined rule; wherein

said rule being that a point degree owned by the customer increases in response to the customer selecting the advertisement and the display point degree decreases for display in combination with a subsequent display of the advertisement information, and

the display point degree does not decrease to zero for the subsequent display of the advertisement information in response to the customer first selecting the advertisement.

9. (previously presented) A computer readable medium for causing a computer to function as an advertisement supplying system for displaying a point which gives viewing persons an incentive to view an advertisement in combination with advertisement information on a terminal apparatus connected thereto via a computer network, the computer readable medium having encoded thereon computer codes which when executed on a processor perform the steps of:

storing identification information of a customer and personal information related to the customer in relation to each other;

accepting the identification information of the customer from a terminal apparatus of the customer

acquiring the personal information related to the customer, said personal information being related to the accepted identification information of the customer; and

determining a display point degree to be displayed in combination with the advertisement information based upon a relationship between the point degree owned by the customer and the display point degree with reference to a predetermined rule; wherein

said rule being that a point degree owned by the customer increases in response to the customer selecting the advertisement and the display point degree decreases for display in combination with a subsequent display of the advertisement information, and

the display point degree does not decrease to zero for the subsequent display of the advertisement information in response to the customer first selecting the advertisement.

10. (previously presented) A method of displaying a point in an advertisement supplying system which gives viewing persons an incentive to view an advertisement in combination with advertisement information on a terminal apparatus connected thereto via a computer network, the method comprising the steps of.

a) storing identification information of a customer and a point degree owned by the customer in relation to each other;

b) accepting the identification information of the customer from a terminal apparatus of the customer;

c) acquiring the point degree owned by the customer from said storage means, said owned point degree being related to the accepted identification information of the customer;

d) determining a display point degree to be displayed in combination with the advertisement information based upon a relationship between the point degree owned by the customer and the display point degree with reference to a predetermined rule; wherein

said rule being that a point degree owned by the customer increases in response to the customer selecting the advertisement and the display point degree decreases for display in combination with a subsequent display of the advertisement information, and

the display point degree does not decrease to zero for the subsequent display of the advertisement information in response to the customer first selecting the advertisement.
